                                                                                                                                                                                                                                        -!- FUNCTION: Important negative regulator in hematopoiesis and immune systems; may be involved in ending inflammatory responses through its inhibitory functions. Inhibite endothelial NF-kappa-B signaling through a cAMP-dependent pathway. Inhibits TNF-alphaninduced expression of endothelial adhesion molecules. Involved in the control of fat metabolism and insulin sensitivity.

-!- TISSUE SPECIFICITY: Synthesized exclusively by adipocytes and
                                                                                                                                                                                                                                                                                                                                                                                                     secreted into plasma.

DISEASE: Defects in ADIPOQ are the cause of adiponectin deficiency (MIM:605441). The result is a very low concentration of plasma adiponectin. Decreased adiponectin plasma levels are associated with obesity insulin resistance, and diabetes type 2. PHARMACEUTICAL: Adiponectin might be used in the treatment of diabetes type 2 and insulin resistance.

Patent No. 6323314
GENERAL INFORMATION:
CENTERAL INFORMATION:
APPLICANT: Bonde, Martin
TITLE OF INVENTION: A Method for Assaying Collagen Fragments
TITLE OF INVENTION: in Body Fluids, A Test Kit and Means for
TITLE OF INVENTION: Method and Use of the Method to Diagnose
TITLE OF INVENTION: Disorders Associated with the Metabolism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 2; Length 1078; 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3251, Application US/09252991A

Sequence 3251, Application US/09252991A

Patent No. 6551795

GRENEAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: APRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1998-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

Sequence 405, Application US/09949002
Sequence 405, Application US/09949002
Patent No. 6900016
GENERAL INFORMATION:
PATENTIAL OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION
TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION
TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION
TITLE OF INVENTION: 0.900-900
CURRENT APPLICATION NUMBER: US/09/949,002
CURRENT BILING DATE: 2000-01-28
PRIOR PRIOR FILING DATE: 2000-09-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Batent No. 5514501

GENERAL INFORMATION:
APPLICANT: Cappello, Joseph
TITLE OF INVENTION: Functional Recombinantly Prepared
TITLE OF INVENTION: Synthetic Protein Polymer
NUMBER OF SEQUENCES: 118

CORRESPONDENCE ADDRESS:
ADDRESSEE: Flehr, Hobbach, Test, Albritton & Herbert
STREET: Four Embarcadero Center, Suite 3400

CITY: San Francisco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 2; Length 72;
